

WayBackMachine

What is the Wayback Machine?

The Internet Archive Wayback Machine is a service that allows people to visit archived versions of Web sites.

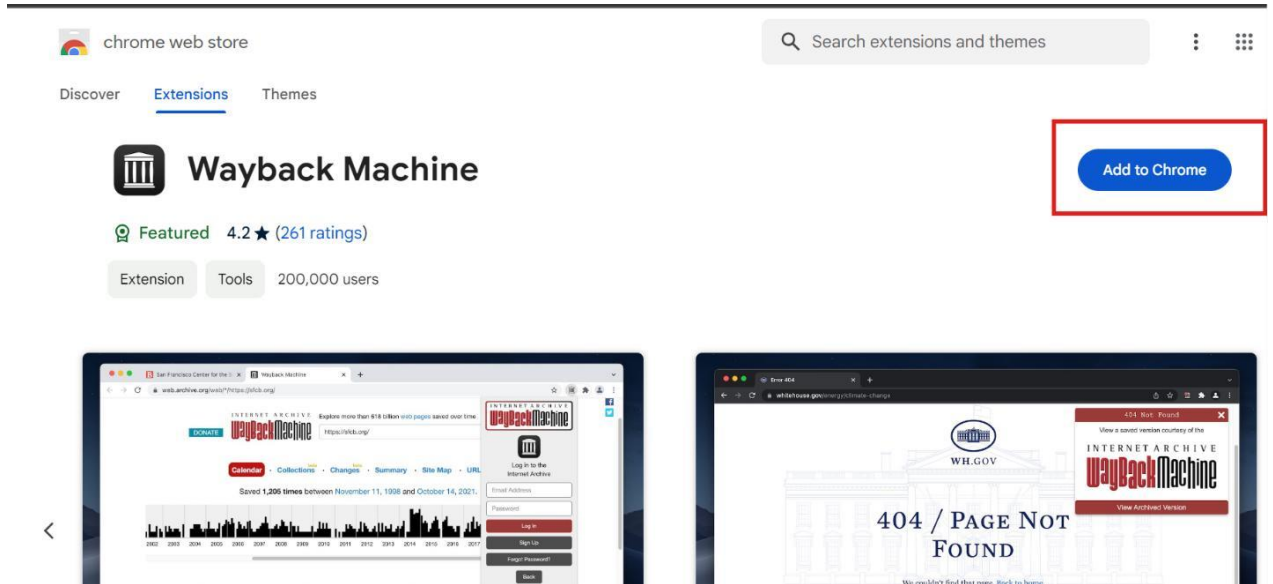

Visitors to the Wayback Machine can type in a URL, select a date range, and then begin surfing on an archived version of the Web. Imagine surfing circa 1999 and looking at all the Y2K hype, or revisiting an older version of your favorite Web site. The Internet Archive Wayback Machine can make all of this possible.

What are the sources of your captures?

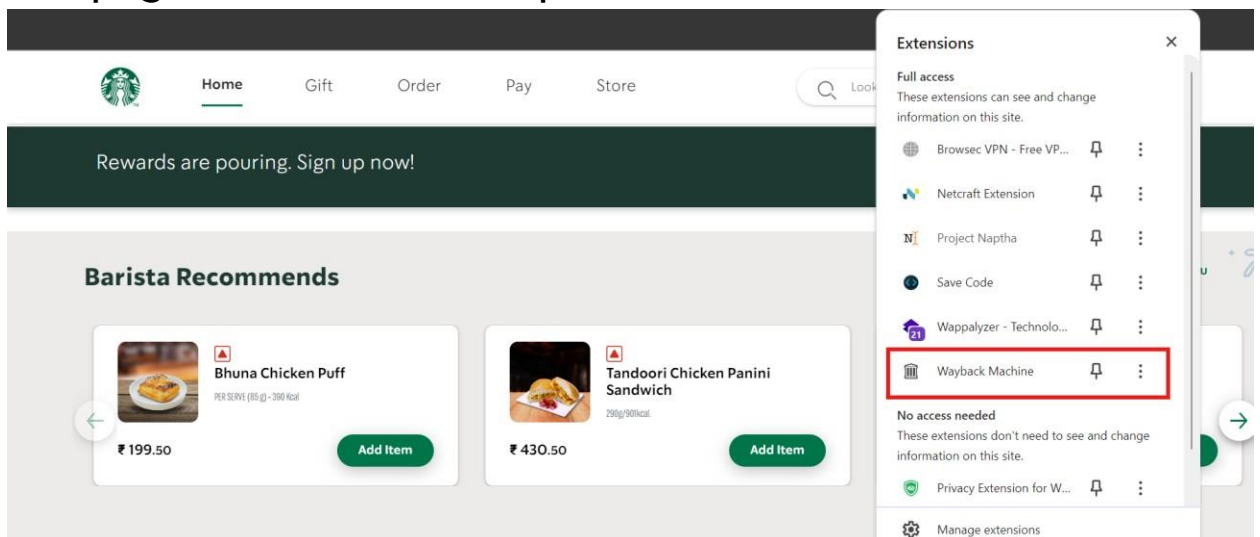

When you roll over individual web captures (that pop-up when you roll over the dots on the calendar page for a URL,) you may notice some text links shows up above the calendar, along with the word “why”. Those links will take you to the Collection of web captures associated with the specific web crawl the capture came from. Every day hundreds of web crawls contribute to the web captures available via the Wayback Machine. Behind each, there is a story about factors like who, why, when and how.

Steps to use The WayBackMachine:-

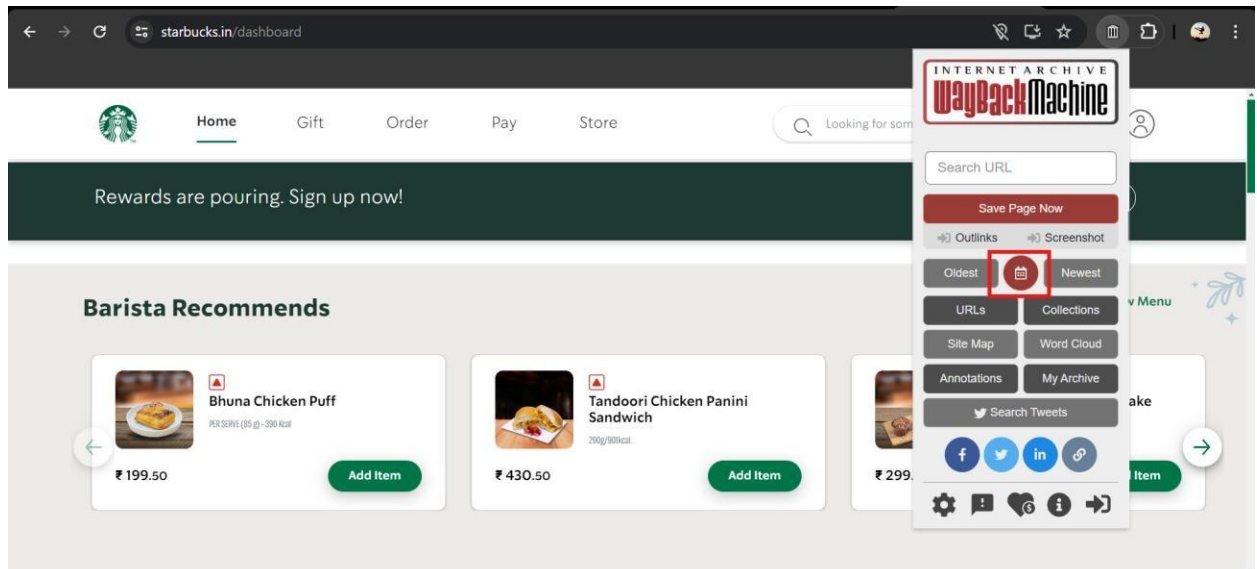

1. Firstly we have to add the WayBackMachine extension to our chrome browser. To do same go the chrome extension and search for WayBackMachine and Add it to the chrome browser.

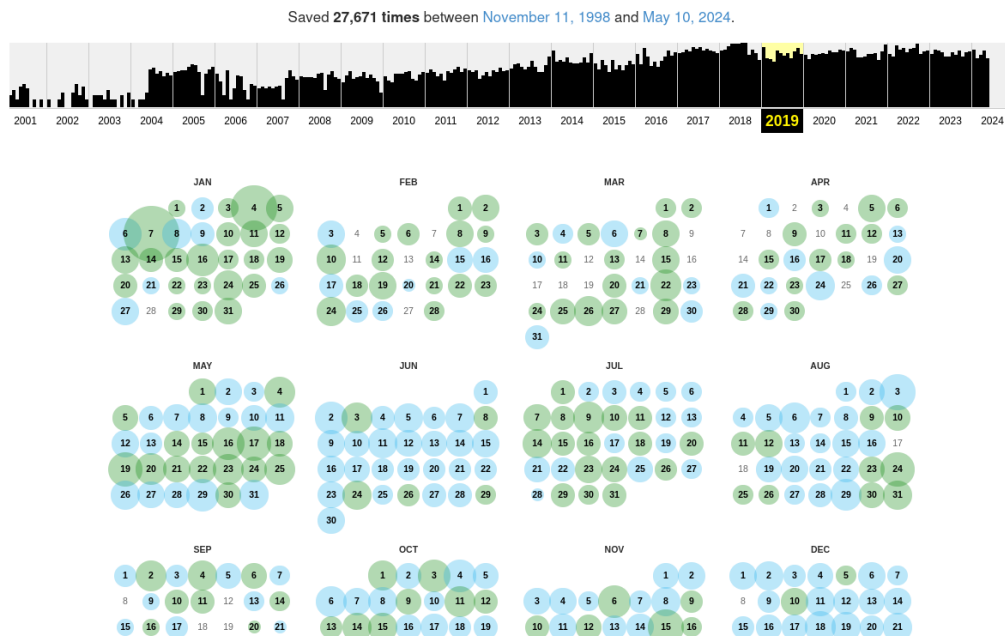

2. Now go the webpage whom you want to get the webpage version from the past.

3. After clicking over the extension you will get few options there. In order to get the calendar of the updates of webpage click on the calendar icon.

4. Now you will have the calendar of all the past updates of that particular webpage.

5. After clicking on your desired date you will have the insight of that webpage on that particular day.
